Cyber Warfare: Prepping For Tomorrow (Volume 1)

Synopsis

No bombs. No bullets. No swordfights. Just a few keystrokes on the computer. And we're done. From author Bobby Akart, his analysis of the threats we face in *CYBER WARFARE* has captured the attention of thousands. In poll after poll, one of the threats facing our nation is the use of a cyber attack to cause a grid down scenario. There are many bad actors on the international stage capable of cyber terror on a massive scale. The list is long, including Russia, China, North Korea, Iran, Syria and now even terrorist groups like ISIS. Each is capable of wreaking havoc in the US by shutting down our power grid and enjoying the resulting chaos. *Cyber Warfare* is a primer on the threats we face as a nation from the bad actors mentioned above. It explores the history of cyber attacks, and discusses the nuances of the terminology. The policies of the United States, and its allies, have evolved over the past decade. The problem of attribution is explored as cyber space allows hackers a convenient place to hide. The all important issue is raised: When does a cyber attack become an act of war? After a thorough review of the threat a Cyber War poses for America, in particular on the nation's critical infrastructure, *Cyber Warfare* will provide preparedness solutions. This guide will also help you answer the question: What if the preppers are right? *ABOUT THE PREPPING FOR TOMORROW SERIES* Freedom Preppers came together in 2011 to share research with others on the subject of prepping. Originally designed as an informational website, FreedomPreppers.com quickly grew in prominence as its articles on preparedness were shared around the web. The goal of the Prepping for Tomorrow series is twofold. First, provide a detailed analysis of the threats we face as Americans. Second, give new and seasoned preppers alike the opportunity to enhance their preparedness plan with this knowledge. NOW AVAILABLE in the Prepping for Tomorrow series: *CYBER WARFARE* *EMP: Electromagnetic Pulse* *ECONOMIC COLLAPSE*

"Bobby Akart takes research to a whole new level, and then boils it down into a detailed analysis understandable by all. The bottom line: get ready my friends. It's not a matter of if, but when." - George Noory, media icon and host of Coast to Coast AM

ABOUT CYBER WARFARE and THE PREPPING FOR TOMORROW SERIESBecause you never know when the day before --is the day before.Prepare for tomorrow!What if the preppers are right?The media shapes public opinion in all formats including news, cinema and television shows. It should come as no surprise that everyone doesn't necessarily form an opinion on every subject. Nor should you be shocked to hear that most opinions are uninformed. We can all give countless examples of this. Most Americans are sheeple, unable to think for themselves. They are content to follow, and many are too lazy to do the minimal research required to have an informed opinion. Their reliance on government or media sources for information makes them susceptible to manipulation. It's simply easier to be a sheeple.As a student of the preparedness lifestyle, I cringe at the media's portrayal of preppers. Initially, the brunt of the ridicule was directed at survivalists. But with the success of National Geographic's Doomsday Preppers, the concept of being a prepper hit the mainstream. Now Preppers are the target of the media's derision. I have my opinion as to why that is the case, and it has its basis in politics. It is my opinion that the media is largely left-leaning and, as a result, does not embrace the self-sufficient lifestyle that is prepping. So, if you can't join them, beat them down--repeatedly. As a recent example, consider the media's dismantling of the Tea Party movement. I see similar attacks on preppers.But, what if the Preppers are right?What if?CYBER ATTACKSimply put, a Cyber Attack is a deliberate exploitation of computer systems. Cyber Attacks are used to gain access to information but can also be used to alter computer code, insert malware or take over the operations of a computer driven network.Why would terrorists bother with an elaborate, dangerous physical operation--complete with all the recon and planning of a black ops mission--when they could

achieve the same effect from the comfort of their home? An effective cyber attack could, if cleverly designed, produce a great deal of physical damage very quickly, and interconnections in digital operations would mean such an attack could bypass fail safes in the physical infrastructure that stop cascading failures. One string of 1s and 0s could have a significant impact. If a computer hacker could command all the circuit breakers in a utility to open, the system will be overloaded. Power utility personnel sitting in the control room could do it. A proficient cyber-terrorist can do it as well. In fact, smart-grid technologies are more susceptible to common computer failures. New features added to make the system easily manageable might render it more vulnerable. In poll after poll, one of the threats concerning preppers is the use of a cyber attack to cause a grid down scenario. There are many bad actors on the international stage. Each is capable of wreaking havoc in the US by shutting down our power grid and enjoying the resulting chaos. No bombs. No bullets. No swordfights. Just a few keystrokes on the computer. Bobby Akart fooled me. He sucked me in with his tantalizing, but informative and entertaining novels. He has proven to be a master story teller, but little did I know that his work in non-fiction also puts him among the best in that too. The scope of Cyber Warfare falls well beyond that of the preparedness community and should be required reading for anyone interested in threats to modern society. This is a serious endeavor into the world of cyber warfare and done with top-notch research and journalistic principles--something we don't often see in today's publishing industry. If any book should get widespread notoriety, it should be this one. I hope to see Akart on the news interview circuit soon. Written without sloppy or cheesy hints at a political agenda, it is a work that should wake us all up to a serious threat. If you're like me, you'll walk away with a healthy fear and respect for our cyber infrastructure and its vulnerabilities.

Be sure to read this! I loved his fiction book cyber attack. This backs it all up. In fact before buying, we were handed a copy and our computer took a crap. Windows, or something else? Read this and you will find the factual basis for his conclusions.

It was very informative, but there is some direct cut and paste from his other books. The information was useful, but if I have read a chapter in one book, I don't want it popping up in other books. I'd

recommend the book, but the cut and paste made it feel phoned in when I got to it.

I read this book before I started reading the Bosyon Brahman series and it is invaluable! Whether you read the rest of Bobby Akart's books or not this is a must read if you live on the grid!!!

I read Ted Koppel's book first, and found a reference to this book. This is much better written than Ted's. There is a lot of information in this book. I am still pulling links out of it to research. Ted has name recognition, but this deserves the media attention.

Eye-opening! Better than Koppel. After having read Cyber Warfare and Lights Out, it is clear Akart has the preparedness knowledge.

Clear, clean, well written, and absolutely necessary for every American to know. More helpful and more honest than Koppel's book on the same topic. Relevant. Important. What can be better than to be relevant and important?

This whole series was great. Couldn't wait to finish it.
