Customer Reviews

From review - "For anyone interested in wooden boat construction, this book is a must. Even if you have built small boats in the past and think you know what you're doing, you can learn from this book."

This book has become a great reference for planning proper repairs on my vintage catboat and for understanding how it's built. Howard Chapelle became an American treasure in his careers as a marine architect and historian and a curator of the Smithsonian. This book provides his unique compilation of early 20th century wooden boat building guidelines and techniques.

Can't say enough about this book. If you're into classic, wood boatbuilding, you need this book. Not only does the author cover all aspects of boatbuilding, he provides plans for several of his designs, from his peapod to his scows. Wonderful stuff!

Chapelle is a senior among the ranks of Gardner, Culler, Oughtred, Herreshoff, Leather, etc. Pictorals and detailed analysis for everything from simple skiffs to complex cutter style boats.

old print good info

good

For anyone interested in wooden boat construction, this book is a must. Even if you have built small boats in the past and think you know what you're doing, you can learn from this book. His methods are timeless and lack the "quick and easy" that has seemed to creep into the boat building world. If you want to build a boat WELL, read Chapelle.
