Motivational Interviewing: A Guide For Medical Trainees

Synopsis

This may be the single most important book you ever buy during your medical training. Rotations come and go, exams come and go, but regardless of specialty, patient-care will be at the heart of your practice. It is no exaggeration to say that motivational interviewing (MI) has transformed the way doctors engage with patients, families, and colleagues alike. MI is among the most powerful tools available to promote behavior change in patients. In an age of chronic diseases (diabetes, hypertension, heart disease, obesity), behavior change is no longer limited to substance use or the field of psychiatry - maladaptive choices and behaviors that negatively impact health outcomes are rampant. There is an explosion of research projects using MI or adaptations of MI in the behavioral health medicine field in the past decade. Hospitalizations can't make people change. How marvelous is it that an evidence-based health behavior change approach (MI) can help people change the outcomes of their illnesses and the course of their lives. This therapeutic approach is not a form of psychotherapy and is not the stuff of cobwebs and old leather couches. MI is readily integrated into regular ward rounds and office visits and provides an effective and efficient approach to patients clinical encounters. Written by experts in the field and medical trainees across medicine, this is the first MI guide of its kind. It explores how MI enhances contact with patients from every level of training, following an accessible, succinct approach. This book covers the application of MI method and skills into practice and also includes numerous clinical scenarios, personal reflections and online animated clinical vignettes (video clips) that share the challenges and successes the authors have focused. Furthermore this book is endorsed by the pioneers of MI: William R. Miller & Stephen Rollnick.

Customer Reviews

"This is a unique collaboration between three seasoned clinicians, educators and researchers and a diverse group of medical trainees in a broad range of practice settings. They have produced an exceptional book on Motivational Interviewing (MI) to help medical trainees understand and implement MI concept, skills, and techniques. The breadth and richness of the chapters empower the reader with remarkable skills to strengthen the patient-doctor relationship. It is filled with skillfully crafted clinical scenarios, tools, tips, and personal reflections of trainees illustrating the experiences and challenges of experiencing, learning, and implementing MI in medical encounters. This guide is inevitably destined to become a classic in medical training." --Dennis C. Daley, Ph.D., Professor of Psychiatry & Social Work, University of Pittsburgh School of Medicine Department of Psychiatry

"This is an outstanding book about Motivational Interviewing that is very clear, easy to read, and engaging. The interesting and appropriate cases grab you. The book is full of examples of words, phrases, questions and statements to use, and will be valuable to practicing health care practitioners, not just the medical trainees to whom the book is geared. The practical advice is invaluable, and I think it will help prevent burn out in any health care practitioner who uses it."

--Patricia K. Kokotailo, MD, MPH, Professor of Pediatrics, Wisconsin School of Medicine and Public Health "This important book, for the first time, provides a guide to Motivational Interviewing that is specifically designed for physicians. Motivational Interviewing is a critical skill for helping patients to change their health behaviors toward healthier habits. Most physicians will confront problems every day with their patients' health behaviors-poor adherence to medications, to diet or lifestyle recommendations, or recommendations to quit smoking or moderate drinking, to name some examples. Yet, physicians have typically received little training in this essential technique. This book should be required reading for all physicians in training, and one also hopes that it will become the foundation of courses of study on Motivational Interviewing during medical training." --Edward

Nunes MD, Professor of Clinical Psychiatry, Columbia University Medical Center, New York State Psychiatric Institute "Motivational Interviewing: A Guide for Medical Trainees provides a straightforward guide for medical students and residents of all clinical specialties, and should be required reading in medical school and post-graduate training. Physicians already out in practice will also benefit greatly from this very clear and concise training manual." --Marshall Forstein, MD, Associate Professor of Psychiatry, Harvard Medical School, Director of Residency Program in

Psychiatry" This evidence-based and theory-informed guide provides excellent, practical instruction for practitioners to cease inflicting help and instead, connect with patients in a manner that helps them want to receive help and actually change behaviors. With practical examples for all types of practice situations and patient populations, this guide helps practitioners embrace the essence of Motivational Interviewing with the understanding that helping patients through dialogue does not always require hours. The authors excel at creating the experience about which they write - the reader will want to learn from each chapter, change practice behaviors, and dive into the next chapter's teachings with a new outlook. All health practitioners would do well in reading and learning from this well-crafted book." --Jennifer D Irwin, PhD, Faculty of Health Sciences, Western University

"This superb book provides the clinician in training with a blueprint for enabling these practitioners to adopt a model for therapeutic interactions that enables patients to participate in their care and treatment decision-making. The authors deliver detailed and clear instruction on the methods for conducting motivational interviewing utilizing case-based examples crafted to give the readers the needed information and skills to be able to adopt this approach in their practice. This book is required reading for all clinicians who are part of any treatment team including physicians, nurse practitioners, nurses, physician assistants, social workers, and public health professionals. This book is a toolkit to change the approach to patient care for the adoption of motivational interviewing in health care practice." --Linda Rose Frank, Associate Professor of Public Health, Medicine, & Nursing Graduate School of Public Health University of Pittsburgh

"This fascinating book is an invitation to enter into the medical trainee's world. It's eloquent writing speaks to the central importance of understanding the complexity of patient behavior and highlights the clinical wisdom of the application of motivational interviewing in health behavior change. This rich and scholarly guide is practical, straightforward, and elegantly balanced between up-to-date theoretical perspectives and clinical scenarios that are well synthesized and illustrated with captivating visual tools. Step-by-step the readers learn the concepts and skills of motivational interviewing through abundant and vivid patient-trainee dialogues. This book will become an essential text for the generation of future physicians that will have to undoubtedly deal with the challenges of behavior change in medical practice." --Jean-Bernard Daeppen, MD, Chief of Alcohol Treatment Center Lausanne University Medical School, Lausanne, Switzerland

"This uniquely informative book provides practical strategies to apply motivational interviewing (MI) from the clinics to the wards. It elucidates the spirit as well as the processes of MI so that medical trainees feel equipped to guide patient in making meaningful changes in their lives. Not only does it incorporate realistic clinical examples of talking to patients about substance use or medication adherence, but it also provides a repertoire of

phrases and skills that trainees can use daily among different populations. Learning MI has fundamentally changed the way I engage with patients, and it has taught me that true healing can only begin when you listen to patients. I would strongly recommend this book to all medical trainees who want to feel connected to their patients and make a positive impact in their lives." --Laura Lin, BA, MS3, University of Pittsburgh School of Medicine "Motivational Interviewing: A Guide for Medical Trainees is a unique manual on interview techniques essential for effective medical practice. In addition to an experienced and knowledgeable group of editors, they have enlisted contributions from medical trainees that represent the next generation of practitioners and provide perspectives from many specialty arenas. This is more than a textbook. Experienced practitioners and trainees alike will be inspired by these stories, perspectives, examples and guidance. This educational program creatively follows its' own advice, asking us to challenge traditional approaches and motivating us to improve our behavior change skills by applying motivational interviewing approaches in our medical practices." --Duncan B. Clark, M.D., Ph.D. University of Pittsburgh School of Medicine "Motivational Interviewing: A Guide for Medical Trainees is truly an invaluable resource for any trainee in the medical profession. It explores not only the 'what' of MI, but also the 'why.' In an era of constant pressure to perform more patient care in less time, it reminds physicians and medical trainees that the fundamental core of their profession is patient-centered care, which can be delivered empathically and effectively within the time constraints of a short patient visit. No matter what your role within the medical profession, this book will teach you how to make every patient interaction therapeutic. A must-read!" --Melanie J Grubisha MD, PhD, General Adult Psychiatry, PGY-1, Western Psychiatric Institute and Clinic, University of Pittsburgh Medical Center "With ever-growing evidence in support of broader use of MI, there has yet to be a guide specifically designed for medical trainees--this is the first. This text explains the fundamental concepts and skills of MI in an approachable, encouraging manner with emphasis on its application in medical settings by providing case examples collected across medical disciplines and personal reflections from aspiring physicians during their training. Mistakenly considered as more of an interpersonal art than something that may be taught, interviewing skill is often covered only superficially in medical school curricula; this book is an essential supplement in that regard and for those seeking to build on the empathy and indomitable humanity that drove us to medicine in the first place." --Ramee Younes, Medical Student 3rd Year, University of Pittsburgh School of Medicine "Motivational Interviewing is an evidence-based collaborative style of communication that enhances practitioner-patient relationships and greatly increases the likelihood that patients will adhere to treatment recommendations and/or engage in and maintain self-management strategies.

Motivational Interviewing: A Guide for Medical Trainees is an important, timely and relevant text that will assist any beginning medical or allied health practitioner to understand and utilize this approach. Written in an easy-to-read, practical and personal style that addresses common challenges in healthcare settings and with case studies and revision quizzes, this is an essential resource that will greatly enhance medical trainee's confidence and effectiveness in their everyday interactions with patients." --Suzanne Habib, PhD, Senior Health Psychologist, Pacific Centre for Motivation and Change-Australia"

Motivational Interviewing: A Guide for Medical Trainees is perfectly pitched to a medical trainee audience in that the authors clearly explain 'counselling' topics and apply them across common medical conditions and situations. Succinctly written in a remarkably effective format, this volume will serve as a cornerstone for training medical practitioners and students in motivational interviewing (MI). ... The testimonials in each chapter are compelling and motivational; they make me want to learn MI even more. The quizzes reinforce major principles highlighted in each chapter. Medical trainees engaged in patient care will be especially appreciative of the invaluable clinical tools that are illustrated in this essential, pragmatic, and practical guidebook." --Steve Martino, PhD, Professor of Psychiatry, Yale University School of Medicine, Chief of Psychology, VA CT Healthcare System"

Motivational Interviewing: A Guide for Medical Trainees does an excellent job establishing the foundations of MI and relating its applications to real life cases. ... I highly recommend this extremely pragmatic guide to practicing physicians and trainees of all levels as a means of improving their communication skills and overall effectiveness in motivating behavior change in patients." --Thomas Radomski, M.D., Chief Medical Resident, University of Pittsburgh Medical Center Montefiore/Presbyterian Hospital, VA Pittsburgh Healthcare System"

This text provides a range of accessible content which is an invaluable resource for those aiming to learn or improve their current skills in Motivational Interviewing. The style of writing and layout enables the reader to gain an insight into the role of MI into clinical settings and importantly its diverse applications across a range of population groups from a pragmatic and applied perspective. This text has been well designed and provides a resource beyond medical school settings and is a must for those beginning or continuing their learning of MI from a research, practice or trainer perspective. It does not shy away from applications of MI to challenging encounters and will be a recommended text for many educators and learners across health and clinical settings." --Dr. Jeff Breckon PhD., Member of the Motivational Interviewing Network of Trainers (MINT)"

Motivational Interviewing: A Guide for Medical Trainees is a comprehensive, well written and practical guide to developing and perfecting these valuable skills. This book's unique contribution to the literature, as a result of a joint effort between experts and trainees, is the

engaging voice of the discussions and the practical recommendations for implementing and navigating these skills. Its emphasis on key points throughout all the chapters assists the reader in focusing on the highlights of motivational interviewing, which can be supplemented by viewing the video references provided at the end of the book. This book will be a highly value adjunct to medical school curricula and Primary Care training programs and an excellent reference for those who care for special populations." --Rosanne Granieri, MD, Professor of Medicine, University of Pittsburgh School of Medicine; Program Director, Clinician Educator Training Program "This book is an enjoyable read. It is well written and makes good use of tables, figures, textboxes, and quizzes to emphasize key points. The online video clips help tie it all together and enable readers to hear MI in use. Weighted Numerical Score: 100 - 5 Stars!" -- Doody's Health Sciences Review"Motivational Interviewing: A Guide for Medical Trainees would be an excellent choice for faculty interested in learning and teachingMI and could easily be utilized as a teaching text for resident physicians. This book is a practical guide that is truly written for trainees, often addressing this population directly. Many mnemonics and summary charts are included, which are helpful for any level of learner. Each chapter concludes with a self-assessment quiz that could serve as a simple method for review or be used as a starting point for discussion if the book is assigned as teachingmaterial. In my opinion, the most helpful aspect of the book is the repetitive use of example conversations between patient and physician, which, although contrived at times, make the concepts feel accessible and easy to incorporate into any clinical encounter." -- Mary Morreale, Academic Psychiatry

Antoine Douaihy, MD, is Associate Professor of Psychiatry at the University Of Pittsburgh School Of Medicine. He is the Medical Director of Addiction Medicine Services, Associate Residency Training Director, and Director of the Addiction Psychiatry Fellowship at Western Psychiatric Institute and Clinic. Throughout his career, he has developed and expanded his involvement in training and mentoring medical trainees in Motivational Interviewing and substance use disorders. His research and publications focus on substance use disorders, Motivational Interviewing, and HIV/AIDS. Thomas M. Kelly, Ph.D. is an Associate Professor of Psychiatry at the University of Pittsburgh School of Medicine. Dr. Kelly is a Licensed Clinical Social Worker who has been in practice at Western Psychiatric Institute and Clinic (WPIC) and the University of Pittsburgh Medical Center (UPMC) since 1982. Dr. Kelly received his doctoral degree in Social Work from the University of Pittsburgh in 1996. He has been affiliated with Addiction Medicine Services (AMS) at WPIC for 15 years and provides outpatient treatment to dual-disordered adults. Dr. Kelly is currently the Director of the Adolescent Substance Abuse Treatment Service at AMS and, in this capacity,

treats adolescent dual disordered patients and supervises other clinicians on the use of individual and family therapy. Dr Kelly has been a member of the Motivational Interviewing Network of Trainers since 2005 and he routinely conducts training workshops, lectures and seminars, locally and nationally. Melanie A. Gold, DO is a Clinical Professor in the Department of Pediatrics, Division of Adolescent Medicine at the University of Pittsburgh School of Medicine and in the Department of Behavioral and Community Health Sciences at the Graduate School of Public Health. She is also a staff physician at the University of Pittsburgh Wellness Center's Student Health Service. She is a certified specialist in Pediatrics with sub-specialty certification in Adolescent Medicine by the American Board of Pediatrics. Dr. Gold has been a Motivational Interviewing Network Trainer since 2000 and has conducted numerous trainings on Motivational Interviewing (MI) and behavior change counseling for the health care setting with physicians, medical students, residents, fellows, nurses, nurse practitioners, physician's assistants, health educators, dental students, psychologists, sports physiologists, social workers, and nutritionists.

As a psychiatry trainee, of course I was going to find this book useful and illuminating. Motivational Interviewing generally has a strong evidence base and has successfully been adapted to brief interventions useful for anyone in any field of medicine. I can say with some confidence, however, that this book is going to be useful even for people who are training in other specialties or clinical disciplines, because it provides an introduction to MI principles and techniques from practitioners who know them backwards and forwards. You will of course have to practice using the skills you can learn from this book to get good at them and to help your patients, but if you're setting sail on Osler's sea, this is the book you're going to want to have read. This is a therapeutic approach that is going to help anyone struggling with a condition that involves a significant behavioral component make changes in their lives. If you are an internist with patients who struggle with making the lifestyle changes they need to for their coronary disease, or an EM doc who sees the same patients over and over who struggle with substance use, or a surgeon operating on a diabetic patient for the fifth time because they just cannot get their glucose under control, this book will arm you. If you are tired of lecturing and hectoring and shaming and prodding and it never seems to work - this is an approach that will work, and will work much faster than it seems like it has any right to. If you are a trainee in mental health...just go ahead and buy. Go on, order it. There is more clinical utility and practical wisdom in these pages than probably any other book on your shelf. It is a little thing, this book, but it can be incredibly powerful if you're willing to put in the work.

This is essential reading for medical students, residents, or really anyone in the health care field. It is easily digestible and full of nuggets of wisdom. As a medical student I started out bright and ready to change the world, but was soon discouraged by cynicism that is rampant among health care providers and by a feeling of disconnect between patients who continued self-destructive behaviors. Motivational interviewing provides a framework of mind that is able to reignite compassion and hope while still dealing with the realities of the health care system. No matter who you are or how much time you have, MI can work for you. This book distills the essence of MI and is written by real medical trainees with real stories. Rather than just learning about MI, it shows you how to do MI. If you want to learn how to truly help patients make changes in their lives, this book is for you!

This book has been absolutely transformative to my clinical training and practice. It is more than just about clinical interviewing, but it is focused on how to understand human behavior in a collaborative and therapeutic way. This book provides you with the basic tenets of motivational interviewing, and includes realistic examples of practitioner-patient interactions using the MI approach. I found this aspect of the book particularly helpful as it moves beyond the theoretical framework to provide useful examples of how to practice MI (much of which I incorporated into my own practice)! Importantly, I found the MI spirit to be especially beneficial to my practice— as it helped me truly try to understand my patients and the stages of change in a way that promoted the change and met patients where they were. Although I think this book will be especially useful for psychologists and psychiatrists at any stage of their career, I truly believe anyone who has any involvement in patient care would truly benefit from reading this (as would their patients!). Buying this book will be one of the best decisions that you make!

As a psychology trainee, I have purchased many books to supplement my training. This book is many steps above all of my previous purchases, and is truly a phenomenal guide to anyone in the psychology or other patient oriented fields looking for an introduction, or an extension, of motivational interviewing skills. Despite only having a limited introduction to motivational interviewing before reading this text, I found this book to be easy to read and accessible. It does not take long before you begin to realize how transformative motivational interviewing can be in your work with patients, and this book has had a direct impact on the way I approach my therapeutic work. Specifically, I have developed a stronger understanding of how to meet patients where they are at in their readiness for change, and how to work together to build on an individual's motivation. This book would provide readers from a variety of domains with new skills to incorporate into their

work with patients, and I cannot recommend this book enough. You won't be sorry with this purchase!

I was recently observing a clinician interview a patient in a psychiatric hospital. The patient was dominating the conversation and it was clear the clinician and patient were not hearing each other. I jumped in with some of my MI skills to aid the clinician. The conversation shifted from an interview to a true conversation. The patient immediately responded positively to my summaries, affirmations, reflections, and open-ended questions. "You really listen," she stated. "If you talk to a man in a language he understands, that goes to his head. If you talk to him in his language, that goes to his heart." -Nelson Mandela

Read this book and you will learn how to talk to your patients in their own language. So often our patients do not feel heard by their providers which creates a colossal barrier to patient care. Read this book, practice MI (ideally with Dr. Douaihy if you have the opportunity), and solicit feedback on your embodiment of MI (the spirit, processes, and skills). You will not regret it!
